

DEPARTMENT OF PHYSIOLOGY

Blood Banking is the process that takes place in lab to make sure that donated blood, or blood products are safe, before they are used in blood transfusion and other medical procedures. Blood transfusion is an indispensable component of global health care which saves millions of lives every year

Department of physiology conducted Early Clinical Exposure (ECE) visit to blood bank for 1st MBBS students vertical Integration with Pathology department.

In the visit to blood bank 8 students voluntarily donated blood with informed consent.

“Blood donation is all about gifting life to other people.”

“Donated blood save lives” was the motto that drove students voluntarily participated in a move to support various social causes and to create awareness about the noble cause of donating blood to the needy.
